

TRV10RFM

The TRV10RFM is a wireless battery-powered, thermostatic radiator valve controller using ZigBee wireless communication. Simply replace the existing, passive head on the standard radiator valve with the TRV10RFM. You can connect up to 6 TRV's to one VS20RF thermostat used with the SALUS universal gateway.

Features

- Easy wireless pairing
- Automatic valve adaptation
- Manual on/off buttons
- LED status indication
- Buttons can be locked
- Frost protection function
- Open window detection function
- Timescale protection function
- Optional mounting ring

Smart Home App

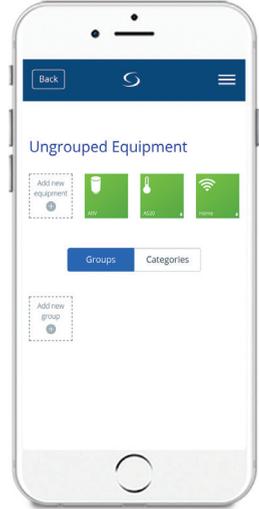

The Smart Home App available on IOS and Android. With easy to use functions and simple to add heating schedules. It is easy to control your individual products settings and heating from anywhere via Smartphone, Tablet or PC using your existing router.

A clear and easy to navigate app.

Simple heating control.

Quick and easy to set up products.

Technical information

Type	Hydraulic Radiator Valve DC Motor M30x 1.5
Input	Three push buttons: <ul style="list-style-type: none">• Manual open/status indication• Manual close/status indication• Pairing
LED Indicator	Bi-Colour, Red/Green
Valve Adaption	Automatic
Power Source	2x AA Batteries
Battery Life	14 Months (low battery indication)
Control Method	Modulating
Communication	2.4GHz ZigBee wireless
Operating Temperature	0 to 45°C / 32 to 113°F
Storage Temperature	-20 to 60°C / -4 to 140°F
Operating Humidity	5 to 95% RH
Protection	IP30
Dimensions	W-52 H-85 D-52mm
